Objective

To take on challenging work that utilizes and hones my ability to design and develop robust software solutions. I desire a position where I have the opportunity to work collaboratively with a team, take on fresh challenges, and grow into a leadership role.

Work History

Web Developer	Markit On Demand	October 2009 - October 2011
Junior Developer	J.D. Byrider	June 2008 - August 2008 (Internship)

Experience

- Two years' professional experience designing and developing software in C# .Net.
- Architected and implemented highly interactive and data-driven websites for multiple Fortune 500 companies.
- Acted as lead developer and owner of multiple large projects with aggressive deadlines. I had full responsibility for the projects from beginning to end.
- Worked with designers, engineers, and project managers to iron out site designs and document system requirements.
- Had as many as three developers working under my direction at one time; I directed their day-to-day efforts to ensure that projects were finished on time.
- Assisted in training new developers.
- Very strong understanding of object-oriented programming concepts.
- Experienced in the use of AJAX to improve user experience and reduce server load.
- Well-versed in legacy browser support (IE6+).
- Comfortable working within as well as improving upon legacy code bases.
- Effective in a self-directed work environment.

Technical

- Fluent in ASP.Net C# and Javascript (including jQuery).
- Excellent understanding of HTML and CSS.
- Experience with Ruby, Rails, Sass, Coffeescript, C++, PHP, SQL, Java, Perl, XML, Git, SVN.

Education

Taylor University, May 2009

B.S., Computer Science New Media Systems

3.4 GPA
